

Hearing Care for Adults
Conference 2009

OUTCOMES MEASUREMENT IN THE AUDIOLOGIC REHABILITATION OF THE ELDERLY

Harvey B. Abrams

Bay Pines VAHCS
Bay Pines, FL

University of South Florida

“Resident of the Month”

“B.B.” is an 88 resident of an ALF. She’s not “hearing as good as I used to” and has difficulty understanding her tablemates at mealtime and she says the woman who occupies the room next to hers complains that she keeps the TV too loud

She just wants to enjoy life again

B.B.'s Audiologic Challenges

- ⦿ Peripheral hearing impairment
- ⦿ Higher level auditory processing
 - Temporal processing
 - Frequency resolution
- ⦿ Working memory
- ⦿ Resource allocation
- ⦿ Visual impairment
- ⦿ Cognitive decline
- ⦿ Motor decline
- ⦿ Divided attention
 - Speech understanding in multiple talker environments

The Clinician's Challenge

- To select the appropriate tools to measure the effectiveness of B.B.'s audiologic rehabilitation treatment plan *from B.B.'s perspective*
- *i.e. outcome measures*

How do we decide which measure to use?

- ◎ A suggested approach:
 - Determine specific treatment goal(s)
 - Determine which outcome domain(s) are most appropriately matched to the goal(s)
 - Determine which specific measure(s) are most appropriate for addressing the domains of interest

Determining treatment goals (income measures)

- ① Why are you here?
 - motivation
- ① What's important to you?
 - prioritization
- ① What do you expect?
 - expectation

APPENDIX: HEARING AID SELECTION PROFILE (HASP)

Name: _____ Age: _____ Date: _____

Instructions: Please place a "v" in the box indicating how strongly you agree or disagree with each statement below. If you do not agree or disagree, place a "v" in the Neutral box. Please do not skip any items. Please complete all the items regardless of whether you are going to receive one or two hearing aids.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
1T. Computers have made our lives easier and better.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2A. If I were losing my hair, I would get a transplant, wear a wig or toupee, or take medicine to make it stop.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3T. I have or would like to have a cellular phone.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4C. I am not an extravagant buyer.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5P. It is easy for me to use small objects such as paper clips, coins, small buttons, and/or zippers.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6CI. It is very important for me to hear conversations with one other person.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7A. There is nothing wrong with using plastic surgery to improve one's appearance.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8L. I consider myself to be an active, busy, on-the-go kind of person.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9P. I do not have arthritis in my fingers.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10L. Physical activity is an important part of my life.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1E. <u>A hearing aid will restore my hearing to normal just as eyeglasses restore vision to normal.</u>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12A. I do not feel comfortable about leaving the house unless I look "just right."	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
13CI. It is very important for me to be able to hear on the telephone.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
14E. I expect that my hearing aid will improve my ability to understand speech in background noise.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
15P. I have good sensation in my fingertips.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6M. <u>I want to wear a hearing aid even if I still have difficulty hearing in some situations.</u>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
17A. I am self-conscious about my appearance.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
18E. My hearing aid will make speech clear, distinct, and understandable in all situations.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
19T. I feel that new technology has improved our lives.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
20M. I know that a hearing aid will help me.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

EXPECTED CONSEQUENCES OF HEARING AID OWNERSHIP (ECHO)

(Cox & Alexander, 2000)

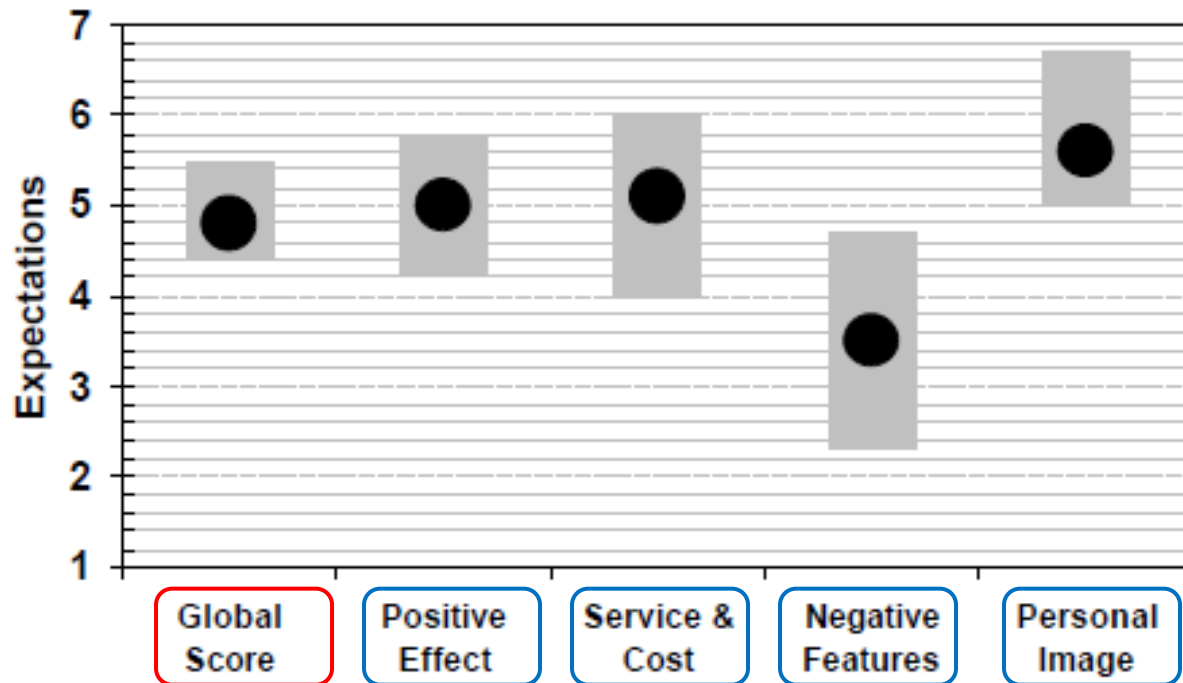

Name: _____ DOB: _____ Today's Date: _____

INSTRUCTIONS: Listed below are statements about hearing aids. Please circle the letter that indicates the extent to which you agree with each statement. Use the list of words below to determine your answer.

- A. Not at all
- B. A little
- C. Somewhat
- D. Medium
- E. Considerably
- F. Greatly
- G. Tremendously

EVALUATIVE QUESTION	RESPONSE	CONCERNS/COMMENTS
1. My hearing aids will help me understand the people I speak with most frequently.	A B C D E F G	
2. I will be frustrated when my hearing aids pick up sounds that keep me from hearing what I want to hear.	A B C D E F G	
3. Getting hearing aids is in my best interest.	A B C D E F G	
4. People will notice my hearing loss more when I wear my hearing aids.	A B C D E F G	
5. My hearing aids will reduce the number of times I have to ask people to repeat.	A B C D E F G

An Outcomes Taxonomy for Audiology

Subjective (Patient-Centered) Measures

- Assess benefit/communication effectiveness across many environments and situations

Abbreviated Profile of Hearing Aid Benefit (Cox & Alexander, 1995)

Four subscales (examples of items):

Ease of communication

- When I am in a small office interview or answering questions, I have difficulty following the conversation.

Reverberation

- When I am talking with someone across a large empty room I understand the words.

Background noise

- When I am in a crowded grocery store talking with the cashier I can follow the conversation.

Aversiveness

- Traffic noises are too loud.

Elderly with none or mild subjective hearing problems - Unaided

Percentile	EC	RV	BN	AV
95	38.5	49	51	65
80	17	29	36.5	39.5
65	14	27	29	21

Speech, Spatial and Qualities of Hearing Scale (SSQ; Gatehouse & Noble, 2004)

- 43-item questionnaire organized into 3 categories:

Speech...

S[peech] S[patial] Q[ualities] version 3.1.1 I. Speech hearing rating scale

NAME	CONDITION	DATE
1. You are talking with one other person and there is a TV on in the same room. Without turning the TV down, can you follow what the person you're talking to says?	Not at all 0 1 2 3 4 5 6 7 8 9 10 Min Max	Perfectly tick if not applicable <input type="checkbox"/> or wouldn't hear it
2. You are talking with one other person in a quiet, carpeted lounge-room. Can you follow what the other person says?	Not at all 0 1 2 3 4 5 6 7 8 9 10 Min Max	Perfectly tick if not applicable <input type="checkbox"/> or wouldn't hear it
3. You are in a group of about five people, sitting round a table. It is an otherwise quiet place. You can see everyone else in the group. Can you follow the conversation?	Not at all 0 1 2 3 4 5 6 7 8 9 10 Min Max	Perfectly tick if not applicable <input type="checkbox"/> or wouldn't hear it
4. You are in a group of about five people in a busy restaurant. You can see everyone else in the group. Can you follow the conversation?	Not at all 0 1 2 3 4 5 6 7 8 9 10 Min Max	Perfectly tick if not applicable <input type="checkbox"/> or wouldn't hear it
5. You are talking with one other person. There is continuous background noise, such as a fan or running water. Can you follow what the person says?	Not at all 0 1 2 3 4 5 6 7 8 9 10 Min Max	Perfectly tick if not applicable <input type="checkbox"/> or wouldn't hear it
6. You are in a group of about five people in a busy restaurant. You <u>cannot</u> see everyone else in the group. Can you follow the conversation?	Not at all 0 1 2 3 4 5 6 7 8 9 10 Min Max	Perfectly tick if not applicable <input type="checkbox"/> or wouldn't hear it

Draft questionnaires

Gatehouse S. & Noble W. (2004). The Speech, Spatial and Qualities of Hearing Scale (SSQ), *Int J Audiol* 43(2):85-89.

Spatial...

13. Can you tell from the sound whether a bus or truck is coming towards you or going away?	<p>Not at all Perfectly</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
14. Do the sounds of things you are able to hear seem to be inside your head rather than out there in the world?	<p>Inside my head Out there</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
15. Do the sounds of people or things you hear, but cannot see at first, turn out to be closer than expected when you do see them?	<p>Much closer Not closer</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
16. Do the sounds of people or things you hear, but cannot see at first, turn out to be further away than expected when you do see them?	<p>Much further Not further</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
17. Do you have the impression of sounds being exactly where you would expect them to be?	<p>Not at all Perfectly</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>

Qualities...

6. Can you tell the difference between different sounds, for example, a car versus a bus; water boiling in a pot versus food cooking in a frypan?	<p>Not at all Perfectly</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
7. When you listen to music, can you make out which instruments are playing?	<p>Not at all Perfectly</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
8. When you listen to music, does it sound clear and natural?	<p>Not at all Perfectly</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
9. Do everyday sounds that you can hear easily seem clear to you (not blurred)?	<p>Not at all Perfectly</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
10. Do other people's voices sound clear and natural?	<p>Not at all Perfectly</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>
11. Do everyday sounds that you hear seem to have an artificial or unnatural quality?	<p>Unnatural Natural</p> <p>_____</p> <p>0 1 2 3 4 5 6 7 8 9 10</p> <p>Min Max</p>	<p>tick if not applicable</p> <p><input type="checkbox"/></p> <p>or wouldn't hear it</p>

IOI-HA						

Application for the Elderly

- Standardized measures (e.g. HHIE, APHAB) may not reveal importance or priority of needs and may be too complex (length, reading level)
- COSI can be the most “ecologically valid” but must be very specific – *where, when, with whom, how often, how important*

Outcome Domains

- **Impairment**
- **Activity/Participation Benefit**
- **Quality of life**
- **Device usage**
- **Satisfaction**

Health-Related Quality of Life (HRQoL)

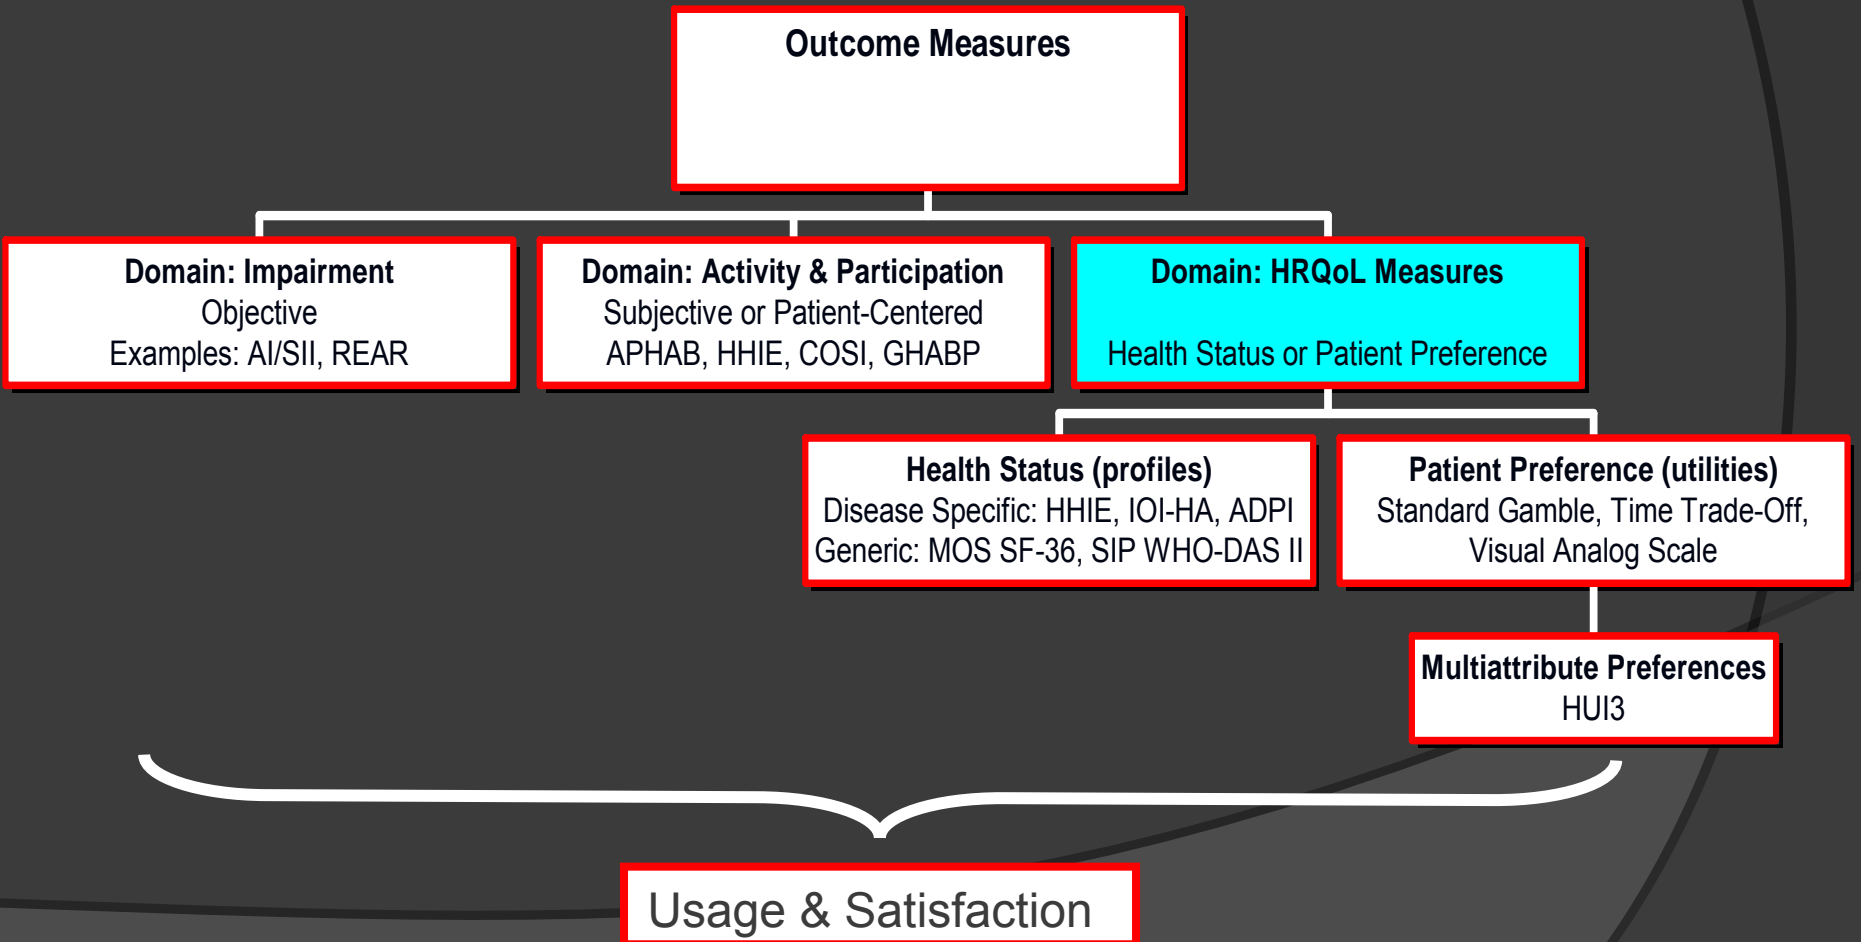

- ◎ The impact of a disease, injury, treatment or policy on the individual's:
 - Functional states (physical, social, role, and psychological)
 - Self perception (which is related to individual values and preferences)
 - Societal and familial opportunities

(NIH, 1997)

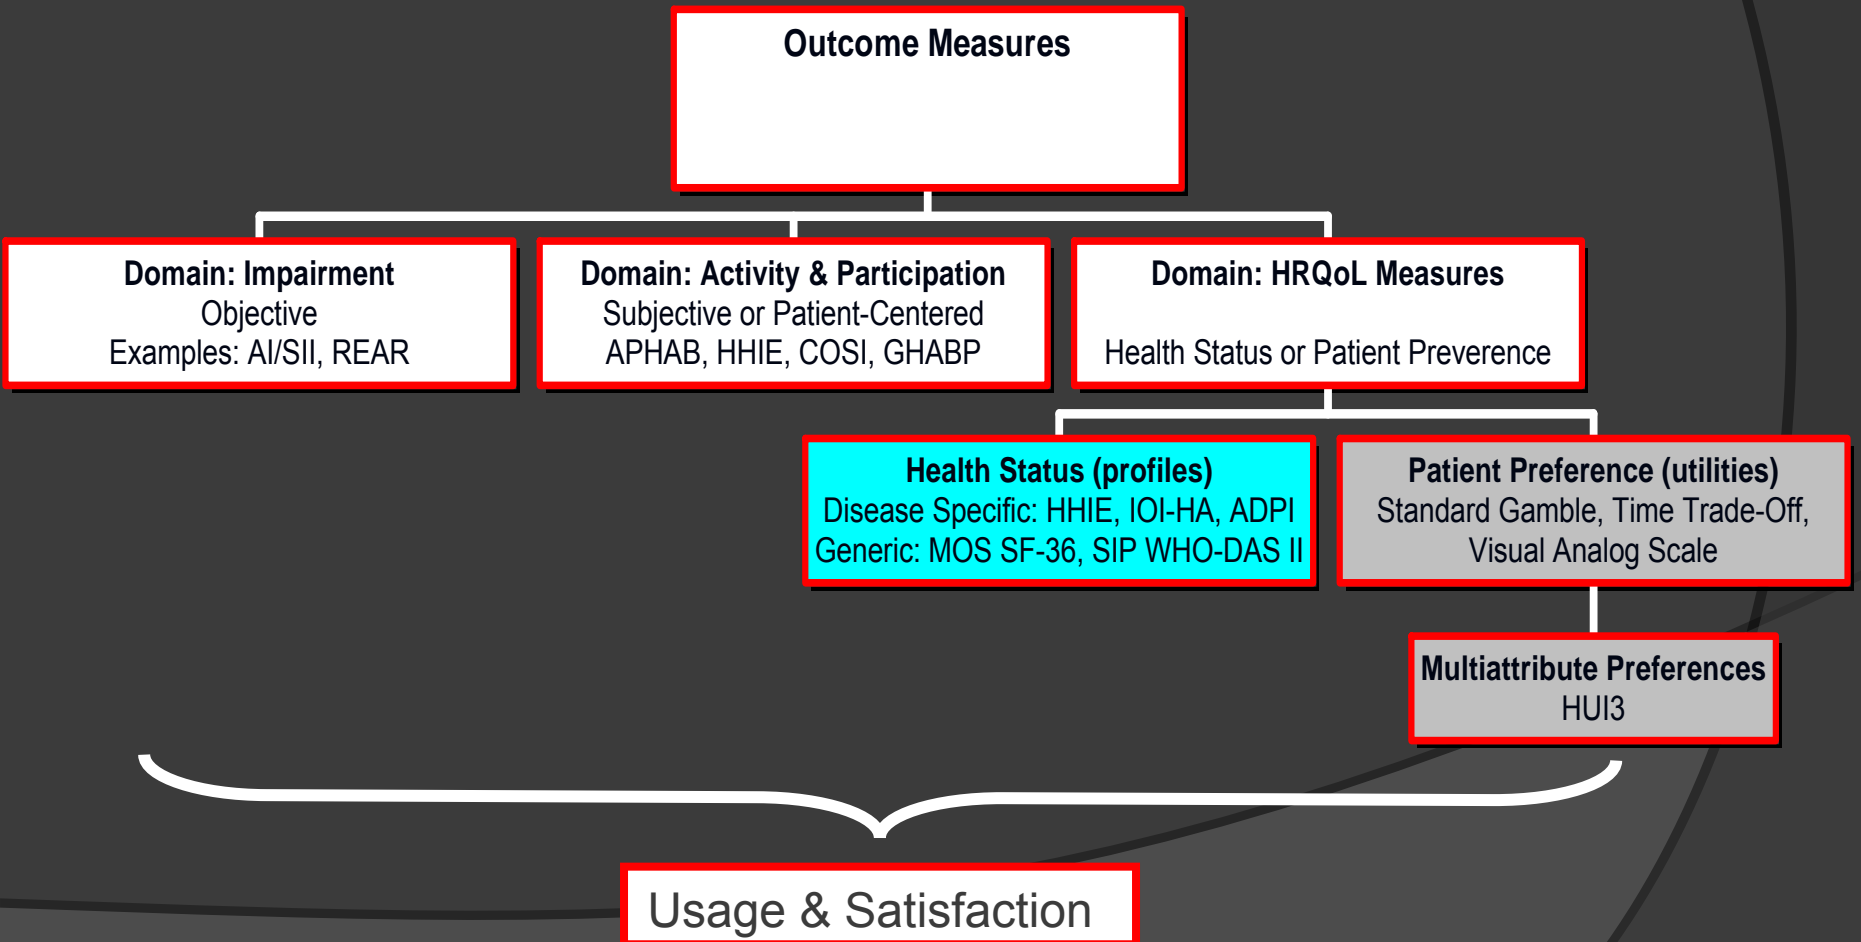

Health-Related Quality of Life (HRQoL) in the Elderly

- ⦿ Hearing impairment decreases a person's ability to communicate
- ⦿ Decreased communication can lead to many negative emotions (isolation, withdrawal, depression)
- ⦿ Negative emotions can affect general health
- ⦿ Audiologic rehabilitation increase the ability to communicate
- ⦿ Therefore, audiologic rehabilitation can partially improve HRQoL

An Outcomes Taxonomy for Audiology

An Outcomes Taxonomy for Audiology

WHO-Disability Assessment Schedule II (WHO-DAS II)

- 36-item instrument (12, and 12+24 items available)
- Assesses what people do in different areas of life
- General health state assessment measure
- Provides a total score as well as profile scores across six domains

Domains map directly to ICF's Activity & Participation Classification

Activity

- Understanding and communicating
- Getting around
- Self care

Participation

- Getting along with others
- Household and work activities
- Participation in society

Understanding and Communicating

Generally Understanding What People Say
Starting and Maintaining a Conversation

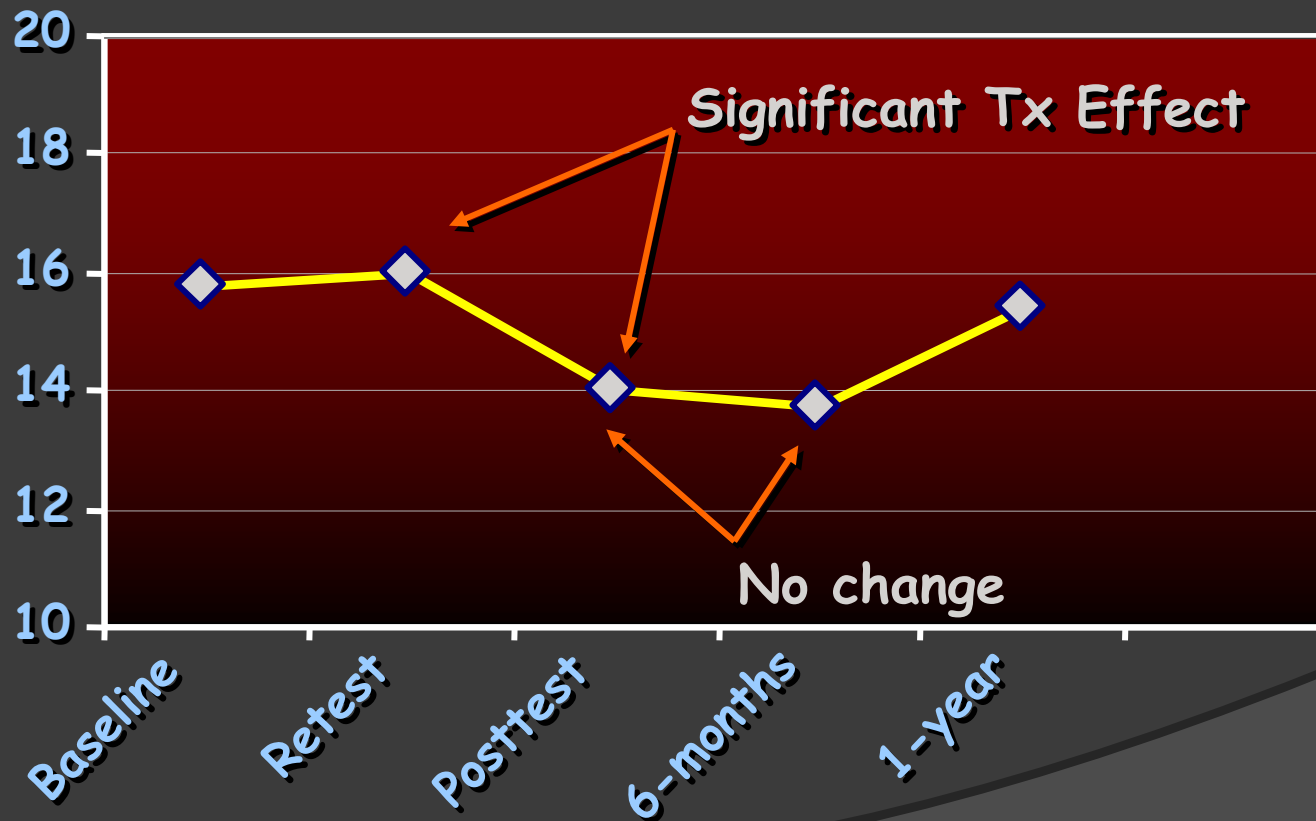

Sensitivity of WHO-DAS II to Hearing Aid Intervention

- ◎ Multi-site study July 2001-July 2004
 - VAMC-Bay Pines, FL; VAMC-Pittsburgh; James H. Quillen VAMC, Mountain Home, TN; VAMC-Nashville

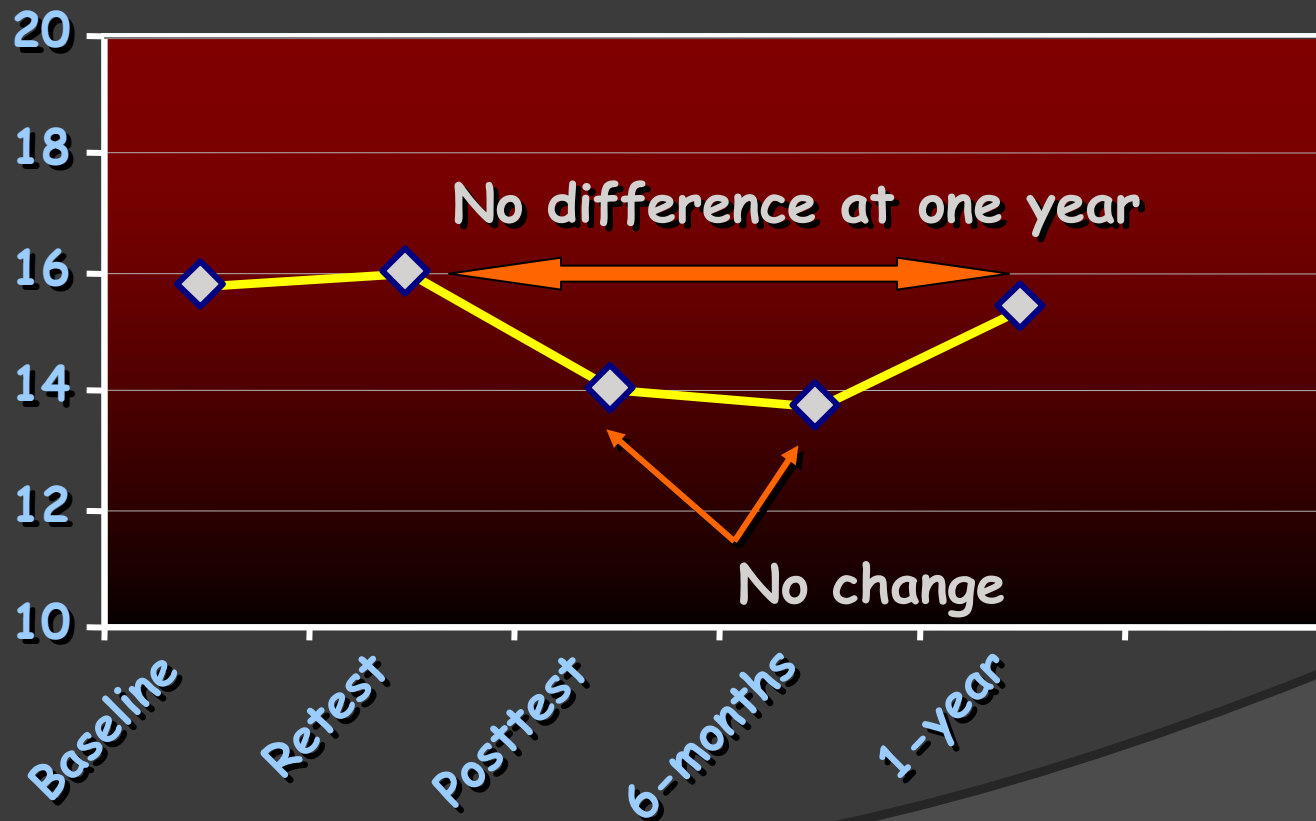

WHO-DAS II - Total

WHO-DAS II - Total

WHO-DAS II - Total

Understanding & Communication

Understanding & Communication

Summary

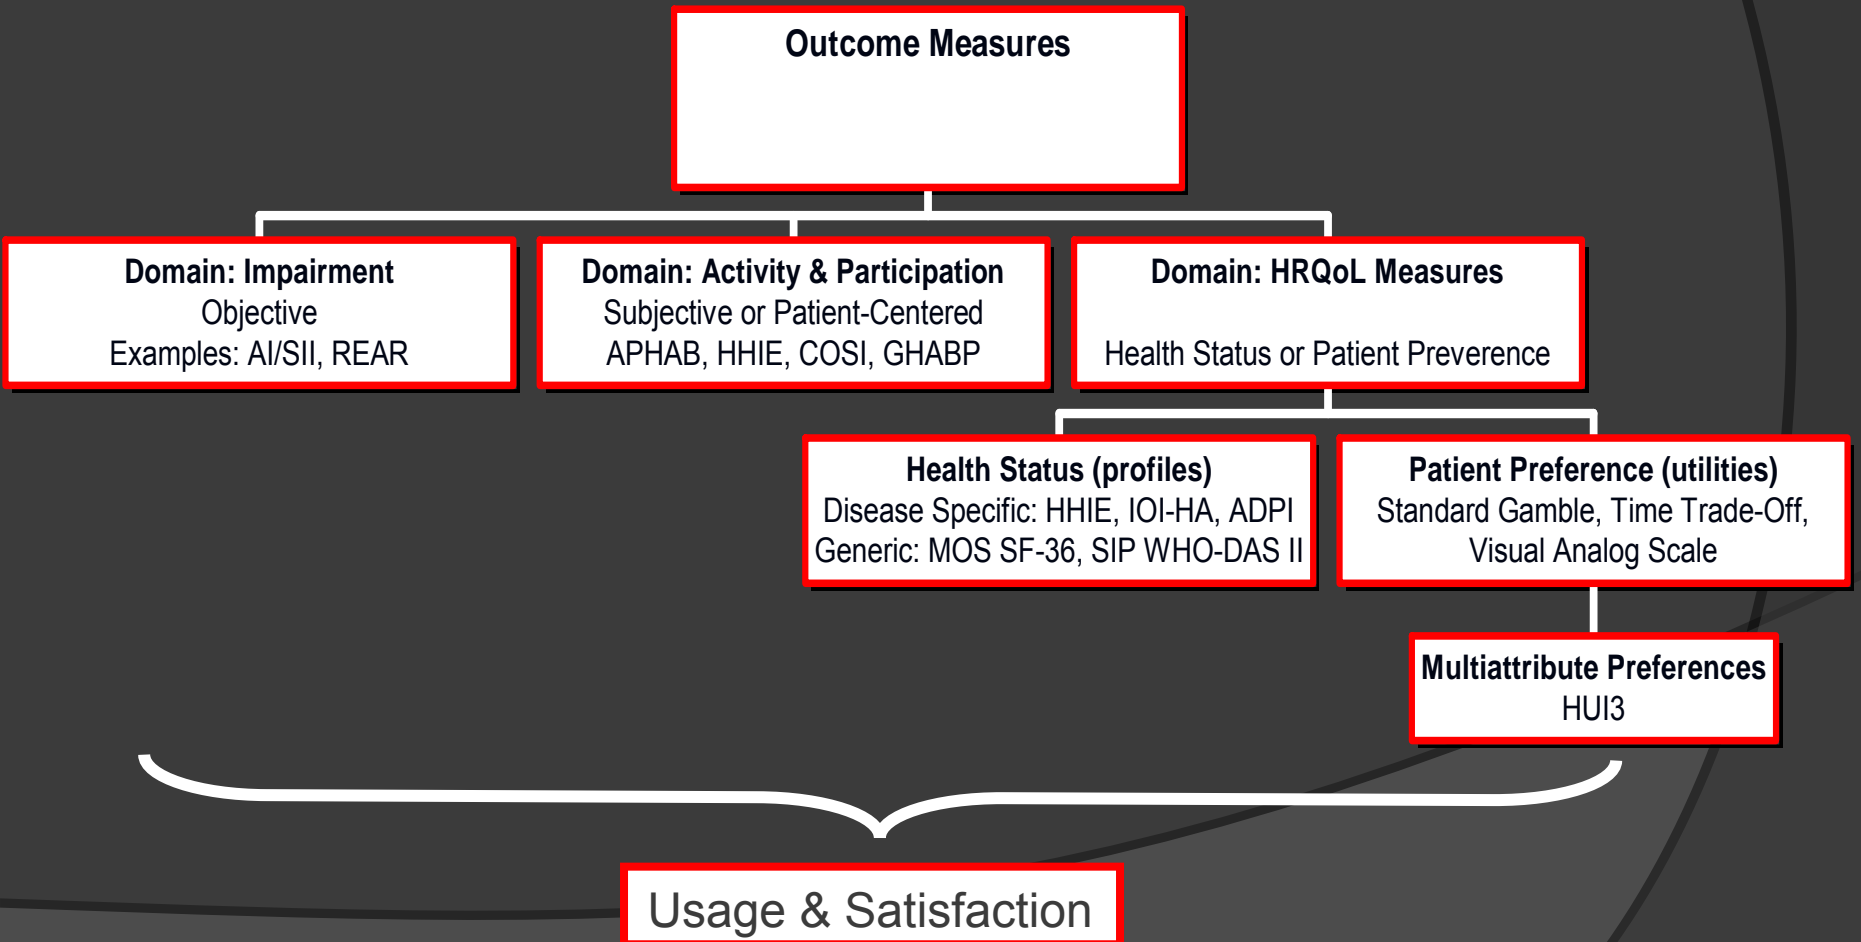

- ◎ WHO DAS II is sensitive to effects of Hearing Aid Intervention in group studies
 - due to Understanding & Communicating subscale

Application for the Elderly

- While generic profiles are useful research tools they have limited application for assessing outcomes on an individual basis. The questions and structure may present a challenge for elderly patients

An Outcomes Taxonomy for Audiology

An Outcomes Taxonomy for Audiology

Outcome Domains

- **Impairment**
- **Activity/Participation Benefit**
- **Quality of life**
- **Device usage**
- **Satisfaction**

Device Usage

- If hearing aids are worn, we don't necessarily know how much benefit patient is getting; however...
- If hearing aids are NOT worn, then we know there will be NO benefit

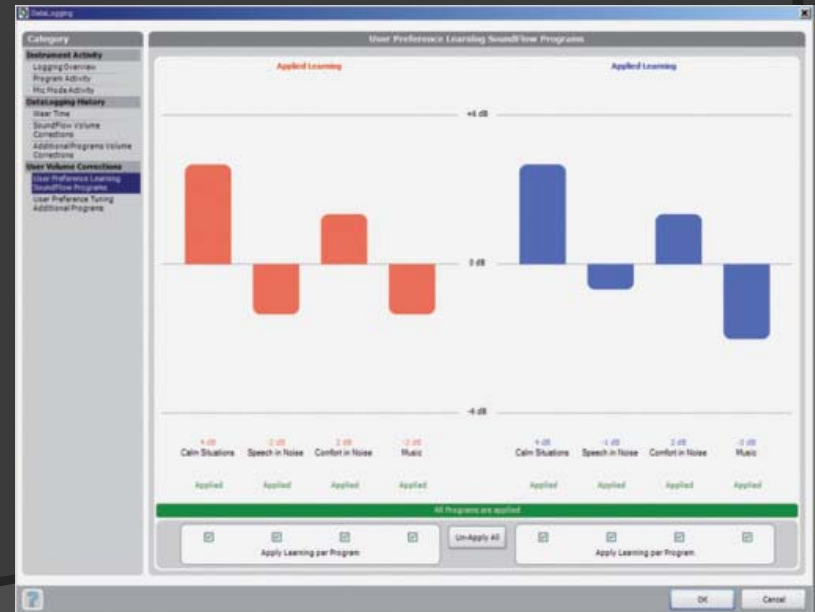

Device usage

- ⦿ For what proportion of the time that you need hearing aids do you actually wear them?
- ⦿ On average, how many hours per day do you wear your hearing aids:
 - More than 8 hours
 - 4 to 8 hours
 - 1 to 4 hours
 - < 1 hour
 - Never

Application for the Elderly

- A quick “surrogate” measure of benefit
- Data logging has provided an objective measure of usage

Outcome Domains

- **Impairment**
- **Activity/Participation Benefit**
- **Quality of life**
- **Device usage**
- **Satisfaction**

Satisfaction with Amplification in Daily Life (SADL; Cox & Alexander, 1999)

Four subscales (examples of items):

Positive Effect

- Do your hearing aid(s) reduce the number of times you have to ask people to repeat?

Service and cost

- How competent was the person who provided you with your hearing aid(s)?

Negative features

- Are you bothered by an inability to turn your hearing aid(s) up loud enough without getting feedback (whistling)?

Personal image

- Do you think wearing your hearing aid(s) makes you seem less capable?

GHABP						
IOI-HA						

Application for the Elderly

- “Satisfaction” is a multi-factorial concept and is only partially associated with benefit

Global Outcome Measures

- Provide a well-rounded picture of activity, participation, use, HRQoL and satisfaction
 - Glasgow Hearing Aid Benefit Profile - GHABP
 - International Outcomes Inventory - Hearing Aids (IOI-HA)

Glasgow Hearing Aid Benefit Profile - GHABP (Gatehouse, 1999)

- Combines “set questions” for pre-selected situations with patient nominated situations

Situations

1. TV at normal volume
2. Conversation in quiet with one person
3. Conversation in busy street or shop
4. Conversation in a group
5. Individual situation # 1
6. Individual situation # 2
7. Individual situation # 3
8. Individual situation # 4

Questions

1. Does situation occur?
2. How much difficulty?
3. Worry, annoyance, upset?
4. Proportion of time hearing aid is worn?
5. How much does aid help?
6. How much difficulty now with hearing aid?
7. How satisfied with hearing aid?

Listening to the television with other family or friends when the volume is adjusted to suit other people

Does this situation happen in your life?

No

Next

<p>How much difficulty do you have in this situation?</p> <p>N/A</p>	<p>How much does any difficulty in this situation annoy or upset you?</p> <p>N/A</p>	<p>In this situation, what proportion of the time do you wear your hearing aid?</p> <p>N/A</p>
<p>In this situation, how much does your hearing aid help you?</p> <p>N/A</p>	<p>In this situation, with your hearing aid, how much difficulty do you now have?</p> <p>N/A</p>	<p>For this situation, how satisfied are you with your hearing aid?</p> <p>N/A</p>

Application for the Elderly

- Global measures assess several outcome domains in a single questionnaire with as few as 7 items.
- Results can be aggregated for program evaluation

Does post-hearing aid fitting AR improve outcomes in the Elderly?

- Auditory training
- Group AR

Auditory Training

- ⦿ Kricos et al (1992)
 - significant change in HHIE scores as a function of auditory training
- ⦿ Kricos and Holmes (1996)
 - no significant change in HHIE scores
- ⦿ Sweetow and Sabes (2006)
 - statistically significant improvements on the HHIE using LACE

Group AR

◎ Abrams et al (1992)

- significant improvement in HHIE scores among a group of adults who received hearing aids plus counseling-based AR

◎ Preminger (2003)

- improvements among participants in a group counseling based AR program as measured by the HHIE
 - greatest reduction in hearing handicap was measured among those who participated in the AR program with their significant others

Group AR

⦿ Kramer et al (2005)

- hearing impaired individuals who participated in the home education program had statistically significantly higher scores than those who did not on the HRQoL item on IOI-HA

⦿ Abrams et al (2002)

- those who participated in group AR exhibited greater mean change in the MCS scale (SF-36V) than those who did not

Group AR

- Hickson et al (2007)
 - control social group demonstrated a significant change on the MCS scores of the SF-36 while the AR group participants did not

A Systematic Review of Health-Related Quality of Life and Hearing Aids: Final Report of the American Academy of Audiology Task Force on the Health-Related Quality of Life Benefits of Amplification in Adults

Abstract

This is the final report of the American Academy of Audiology Task Force on the Health-Related Quality of Life (HRQoL) Benefits of Amplification in Adults. A systematic review with meta-analysis examined evidence pertaining to the use of hearing aids for improving HRQoL for adults with sensorineural hearing loss (SNHL). Relevant search strings applied to the CENTRAL, CINAHL, Cochrane Reviews, ComDisDome, EBMR, and PubMed databases identified randomized controlled trial, quasi-experimental, and nonexperimental pre-post test designed studies. Sixteen studies met a priori criteria for inclusion in this review. A random-effects meta-analysis showed differential results for generic versus disease-specific HRQoL measures for within- and between-subject designs. Although generic measures used for within-subject designs did not demonstrate HRQoL benefits from hearing aids, mean effect sizes and confidence intervals for within-subject designs and disease-specific instruments suggested that hearing aids have a small-to-medium impact on HRQoL.

Further, the between-subject studies supported at least a small effect for generic measures, and when measured by disease-specific instruments, hearing aids had medium-to-large effects on adults' HRQoL. This review concludes that hearing aids improve adults' HRQoL by reducing psychological, social, and emotional effects of SNHL. Future studies should include control groups using randomized controlled trials.

Key Words: American Academy of Audiology Task Force on the Health-Related Quality of Life Benefits of Amplification in Adults, health-related quality of life, hearing aids, hearing loss, meta-analysis, nonacoustic benefits, systematic review

Abbreviations: AAA = American Academy of Audiology; ADPI-VAS = *Auditory Disability Preference Index—Visual Analog Scale*; AHRQ = Agency for Healthcare Research and Quality; CENTRAL = Cochrane Central Register of Controlled Trials; CI = confidence interval; CINAHL = Cumulative Index to Nursing and Allied-Health Literature; ComDisDome = Communication Sciences and Disorders DOME; EBM = evidence-based medicine; EBMR = Evidence-

Does AR improve HRQoL outcomes?

- research findings appear to be mixed
- evidence is beginning to emerge that audiologic rehabilitation, to include both hearing aids and non hearing aid based interventions, have a positive impact on the self-perceived HRQoL among elderly adults with hearing loss

B.B.'s Outcome Measurement Protocol

- Administer “income” measures to maximize appropriateness of treatment plan
- Use COSI to identify specific treatment goals based on income measures
- Verify audibility (probe microphone)
- Measure 30-day post-treatment outcome using COSI
- Reassess in 6+ months using IOI-HA

Future Considerations

- ① Outcome assessment of audiologic rehabilitation in the elderly may involve the measurement of non-auditory performance
 - Visual attention
 - Reaction time
 - Measures of resource allocation

Objective Measures of Listening Effort: Effects of Background Noise and Noise Reduction

University of California at Berkeley

Purpose: This work is aimed at addressing a seeming contradiction related to the use of noise-reduction (NR) algorithms in hearing aids. The problem is that although some listeners claim a subjective improvement from NR, it has not been shown to improve speech intelligibility, often even making it worse.

Method: To address this, the hypothesis tested here is that the positive effects of NR might be to reduce cognitive effort directed toward speech reception, making it available for other tasks. Normal-hearing individuals participated in 2 dual-task experiments, in which 1 task was to report sentences or words in noise set to various signal-to-noise ratios. Secondary tasks involved either holding words in short-term memory or responding in a complex visual reaction-time task.

Results: At low values of signal-to-noise ratio, although NR had no positive effect on speech reception thresholds, it led to better performance on the word-memory task and quicker responses in visual reaction times.

Conclusions: Results from both dual tasks support the hypothesis that NR reduces listening effort and frees up cognitive resources for other tasks. Future hearing aid research should incorporate objective measurements of cognitive benefits.
