

Legit innovations for teens

Christine Jones, AuD

Agenda

1. Learnings from schools: evidence of challenge
2. Building features around needs: evidence based design
3. Features that work: evidence of benefit

All students sat facing the teacher and district rules forbid teachers from loitering in downtown ice cream stores, dressing in bright colors, dying their hair, and even traveling beyond city limits without permission from the school board.

Common Core adopted by 45 states

- **Teaching teamwork.** The Common Core State Standards identify collaboration and teamwork as a 21st century skill to be taught. we're moving into a collaborative culture of continuous learning within networked communities. teachers give it life in the classroom by using team contracts, peer collaboration rubrics, and work ethic rubrics to turn group work into effective teams.

Table 1. Summary of Skills in the CCSS

Skills strongly/largely reflected in the CCSS	Skills requiring an academic foundation articulated by the CCSS with technical elements outside the scope of the CCSS	Skills that could be reflected in CCSS-aligned instruction	Skills not covered by the CCSS
<ul style="list-style-type: none"> > Communications skills > Teamwork/collaboration skills > Problem-solving skills > Reasoning skills > The application/extension of core content in various situations > Use of data > Research skills > Time management skills > Use of technology (in ELA/literacy) 	<ul style="list-style-type: none"> > External and internal work-based communications skills > Job-seeking skills > The application/extension of core content in nonroutine ways 	<ul style="list-style-type: none"> > Motivation/self-discipline skills > Study skills > Adaptability skills > "Enjoyment" of learning > Recognizing strengths and weaknesses 	<ul style="list-style-type: none"> > Conflict resolution skills > Technology-based project management skills > Mentoring skills > Career planning and exploration > Ethical reasoning > Quality control systems and practices > Workplace safety and health > Emergency procedures and response techniques

Focus on the teacher

Cruckley, Scollie, Parsa (2011)

Figure 4. Boxplots depicting the L_{eqA} data for each observation site.

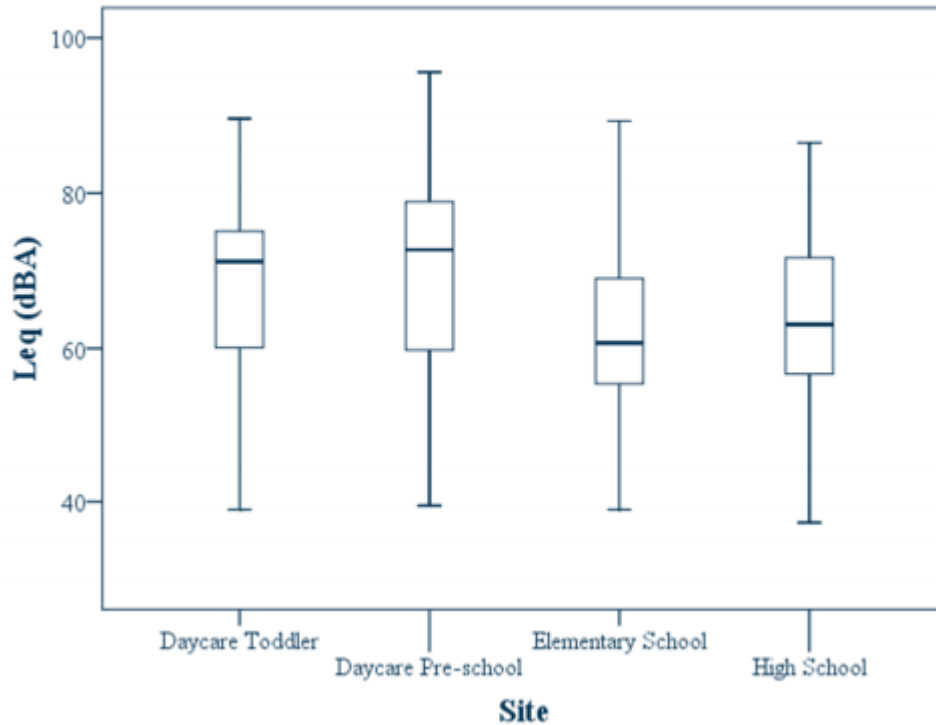

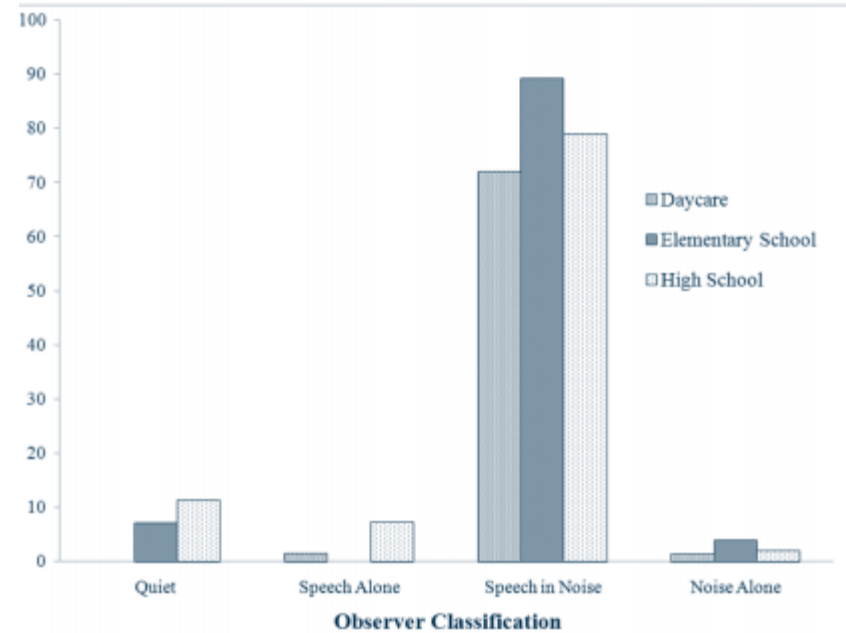

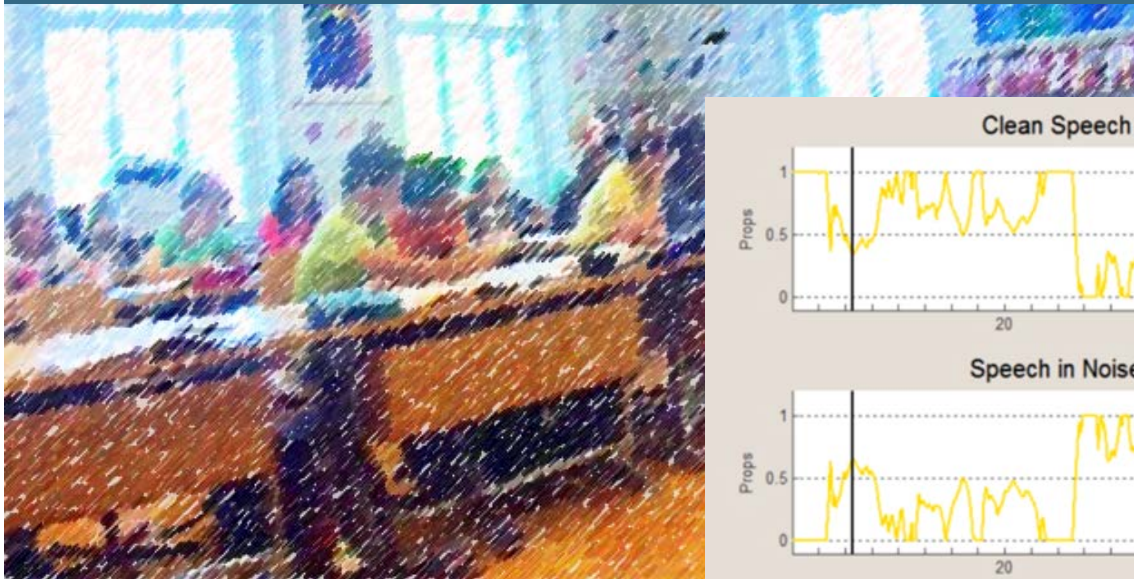

Figure 5. Proportion of time spent in each sound environment, as classified by the observer for each site.

Classroom listening study- Feilner, 2015

- 9-15 years old
- Mainstream class environment
- Audio and video recordings throughout the day
- Observed Automatic classification and behavior of HIs
- Student interviews regarding hearing performance throughout the day

Findings

Far less
frontal
instruction

More
interaction as
students got
older

Multi-media

Hearing
difficulties
correlated
more with
teaching style
than
acoustics

Group work in
particular
reported as
unsatisfactory

Acoustics of a child's school day

Real challenges for teens with HL in school

- **CCSS**

Schools are purposefully moving toward more collaborative styles of learning

- **Cruckley, Scollie, & Parsa and ...**

Acoustics are such that basic amplification unlikely to yield adequate hearing performance for most of the day

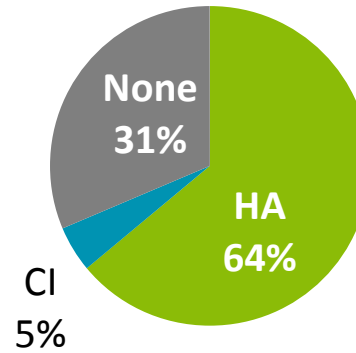

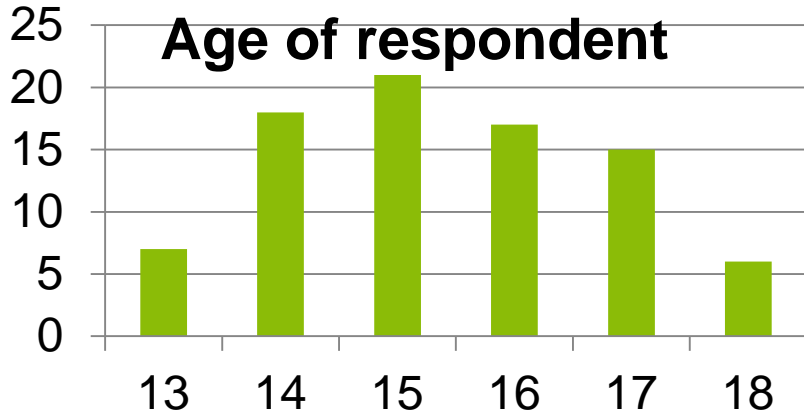

- **Feilner**

Traditional wireless microphones designed to address only 22% of the typical school day

**Given these
challenges, what
do teens think?**

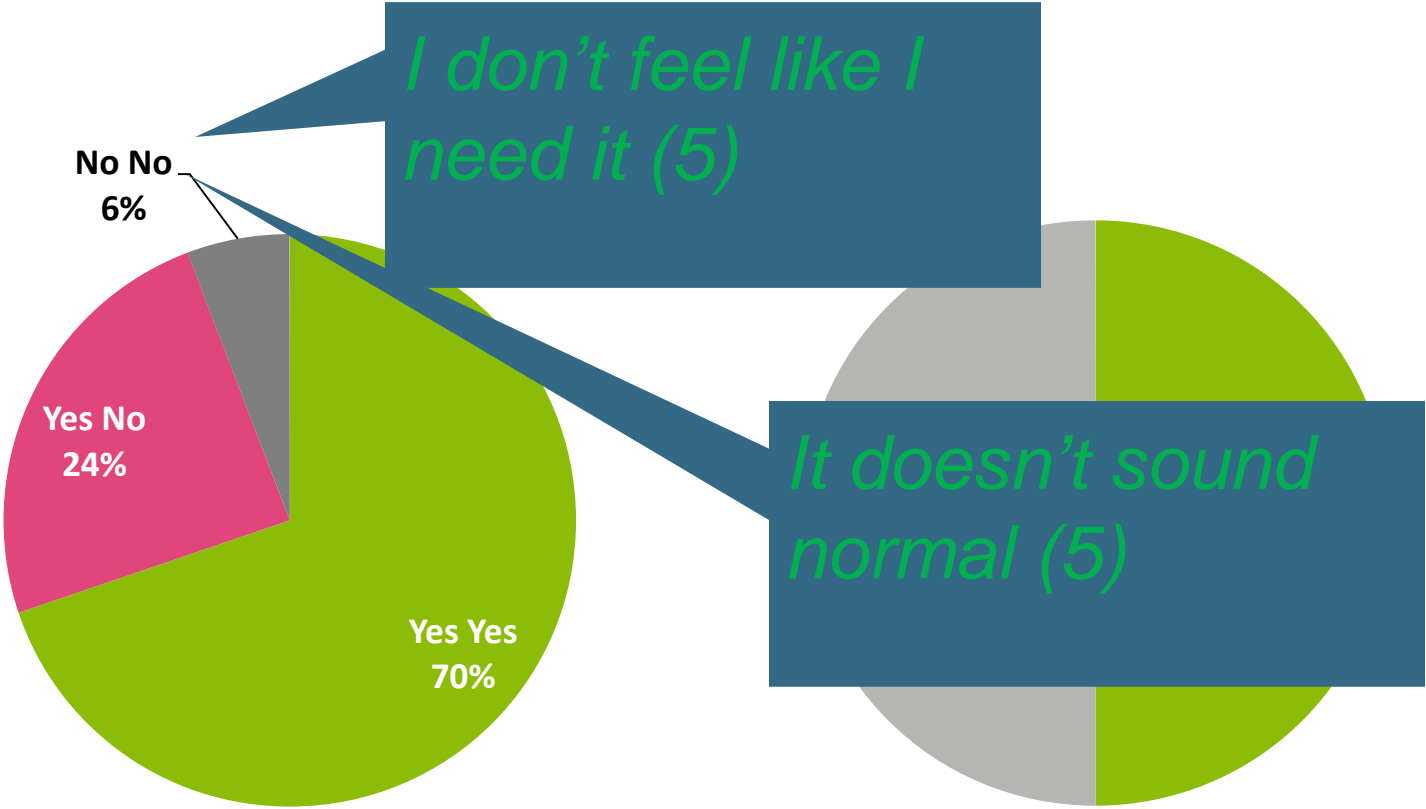

86 teenage students completed survey

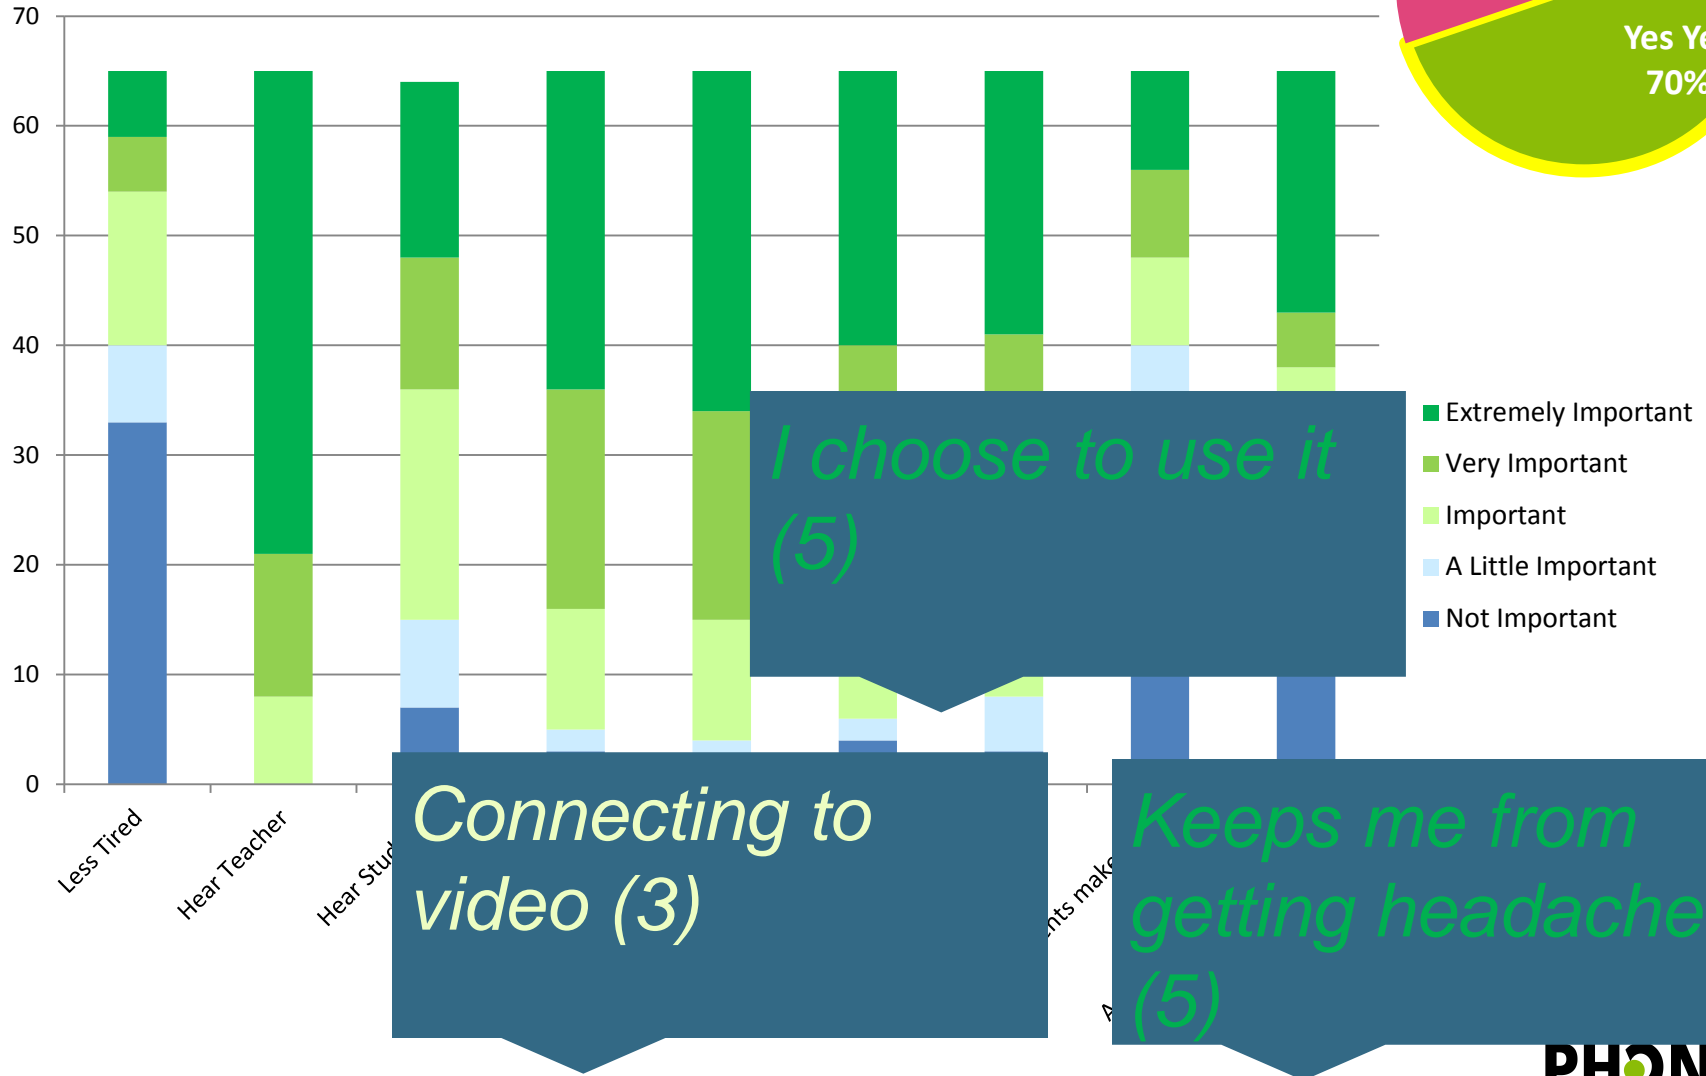

Average Audiometric Thresholds

Use profiles

Reasons for Use

Benefit by situation

Students who ceased using wireless products

• N=22

Multi-talker babble

Multi-talker babble

- Multi-talker babble (**noise**) was presented at 4 corner speakers, simulating a classroom with multiple working groups such as a team project or lab exercise
- IEEE sentences (**targets**) were randomly presented from 0, 90, and 270 degrees simulating a group of 4 near-field students engaged in group work around a table
 - 20 sentences from each of the three speakers
 - Calibrated to 70 dB
- To avoid floor and ceiling effects, signal to noise ratio was between +/- 6 based on individual performance
- Listener was scored on word correct for IEEE sentences arriving from all angles

Speech perception results show significant improvement with Roger Touchscreen small group mode

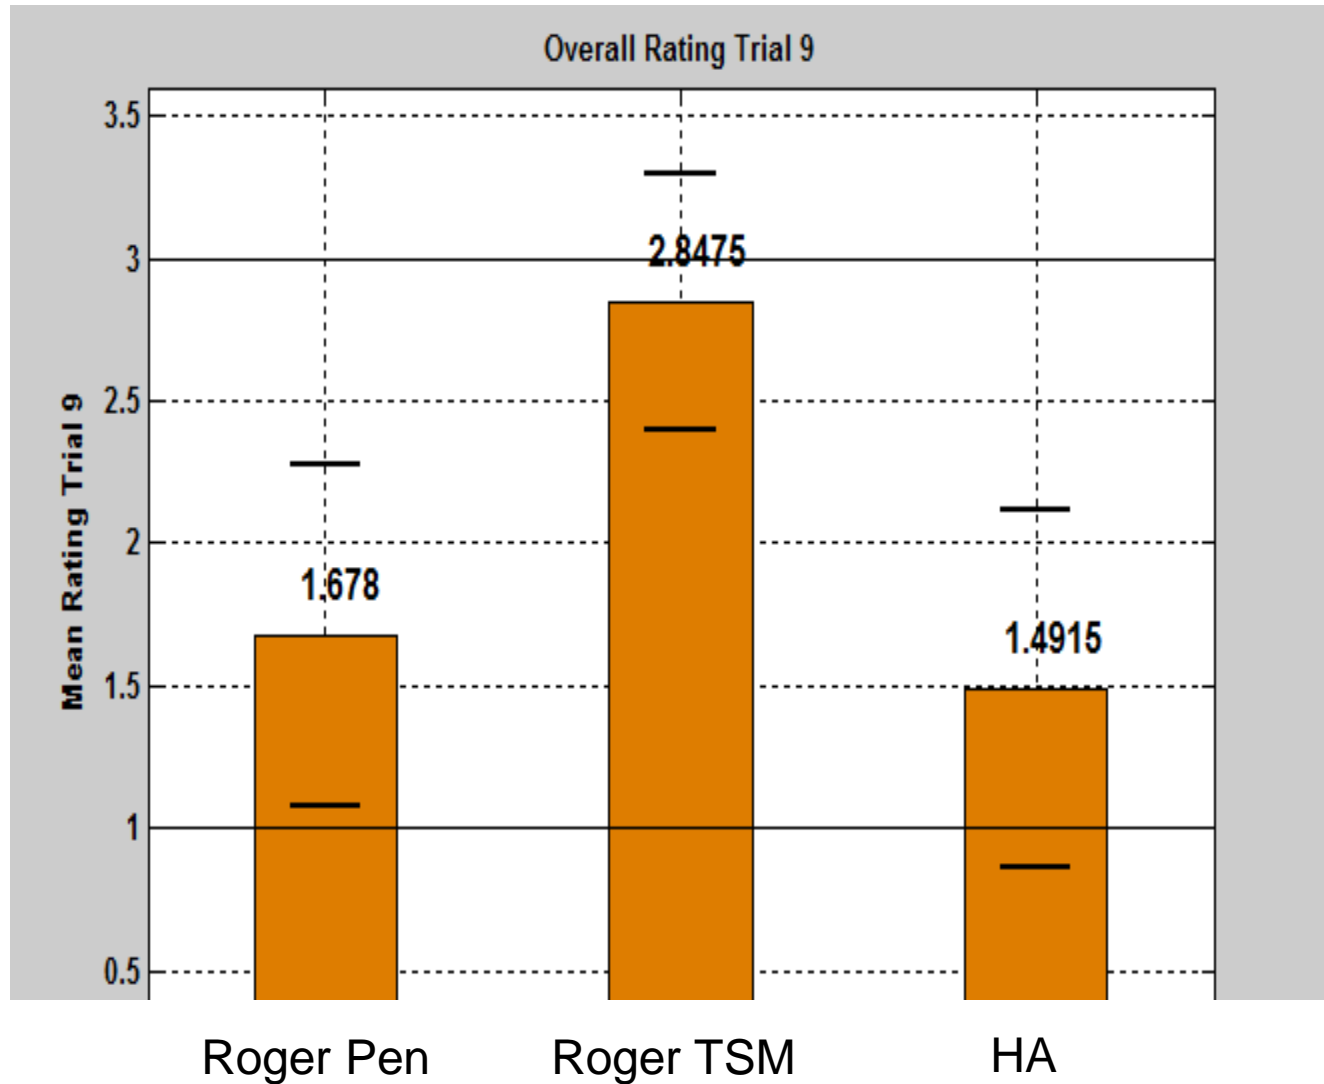

- Significant improvement compared to HA only
 - ** Significant improvement compared to HA+Roger Pen
- p= <.05

Small group work conditions

Roger Touchscreen –small group mode

N=68

In summary

- Classroom listening is becoming increasingly diverse
- Opportunities in classroom hearing performance have been identified by subjective and objective research
- The use of directional microphones in combination with remote microphones improves understanding of near field talkers
- The use of the multi-microphone small group mode in the Roger TouchScreen mic improves understanding of multiple near field talkers in noise
